Innovative high-precision machining solutions

Precitrame Machines SA has been developing state-of-the-art automated production equipment since 1987. The company's [main areas](#) of activity are [rotary transfer](#) machines and [finishing](#) machines.

Precitrame offers innovative machining solutions to users who demand a lot from their machine tools, users who want their machines to be ever faster, ever more accurate, whilst still retaining a high level of flexibility.

A team of around a hundred people is involved in the research and development of tailor-made machine concepts to meet the specific requirements of customers.

Precitrame technology is used in a host of high-technology industries such as the car industry, clock and watchmaking, telecommunications and the medical sector.
