Home

MMS provides membrane systems and solutions for many industries (/industries/). We have run over 250 applications in our laboratory and have generated in-depth know-how on how membrane technology can clarify, fractionate and concentrate your target product.

(/industries/dairy/)

Dairy

Milk and whey concentration and fractionation are standard processes for MMS. Contact our dairy experts to support you with your applications.

(/)

(/industries/food-
beverages/)

Food & Beverages

The food and beverage industry faces continuously pressure to produce, invent and re-invent new products. Membrane technology can be a key vehicle for innovation.

(/industries/extract/)

Extracts

Are you producing colour compounds or flavors? Membrane technology can enrich your target molecule.

Contact (/company/contact/)  [English \(/\)](#) [Deutsch \(/de/\)](#)

(/)

(/industries/pharmaceutical/)

Bio-Pharma

MMS bio-pharmaceutical membrane systems are fully documented and constructed according to GMP.

(/industries/chemical/)

Chemical

Membrane technology is relatively new to the chemical industry, however can potentially add significant improvements to your current process.

(/)

(/industries/industrial-
water/)

Industrial Water

Reduction of water usage or a re-use of water is a financially and ecologically attractive proposition. A membrane process can purify water and in many cases re-win a by product.

MolkeMAX

Add value to your whey: MMS AG launches MolkeMAX

Contact (/company/contact/)  [English \(/\)](#) [Deutsch \(/de/\)](#)

In recent years, MMS AG has been working on the development of the MolkeMAX, a unique reverse osmosis system for cheese manufacturers to concentrate around 5,000 to 20,000 liters of whey per day. With this filtration a big amount of the water in whey is separated and high-quality ingredients such as protein, lactose and minerals are concentrated.

MolkeMAX Advantages: processing of whey into valuable animal feed, saving of transport costs, easy operation, low investment costs, production of water, reduction of waste water, automatic cleaning
