ABOUT US

Company profile

Mircea Tudor Scan Tech operates, in Switzerland, an extensive, state-of-the-art factory for aircraft and cargo scanners (3,000 square meters of offices and technological space along with 7,000 square meters of testing areas). In Romania, the company has a 6,000-square-meter R&D center (11 laboratories and 1 fast-prototype development section).

The R&D center features a comprehensive platform for testing, implementation and validation — organized into a Scientific Board for R&D and a Project Development Center, which supports other critical work streams throughout the organization. As a technologically intensive company, we are deeply involved in an array of national and international R&D initiatives.

We believe in our vision for a safer approach to air, land and sea transportation — and we want to change the world by investing massively in R&D and delivering products and solutions that improve safety in the global transportation sector.

Mircea Tudor Scan Tech has created and is currently operating, the largest interdisciplinary research facility in Eastern Europe — The East European Center for Integrated Applied Research.

Why Choose Us?

— Our Vision

At Mircea Tudor Scan Tech, we aim to provide safe, secure and innovative scanning solutions that address the pressing needs of today's global transportation sector, in sectors as essential as aviation, border control, ground transportation and logistics management. By collaborating with security experts, regulatory officials, border control authorities and the transportation industry as a whole, we will change the world by helping detect, mitigate and prevent safety risks across the global economic value chain.

For more than two decades, we have provided secure perspectives in air, sea and land transportation.
