

## Swiss machine-tool manufacturer

Tornos uses a range of machining technologies with swarf removal capabilities to produce parts requiring extreme precision and quality.

Whether machining simple or highly complex parts, in small or large runs, Tornos machines can offer you a solution guaranteed to meet your needs!

### SwissNano: Watch Me!

The SwissNano was designed to meet the demand for small workpieces requiring very high precision. For example, its kinematics enable the machine to produce two thirds of watch movement components, from the simple to the most complex, with excellent surface finishes.

## MultiSwiss

Tornos introduces two new variants of the MultiSwiss – the MultiSwiss 8x26 and the MultiSwiss 6x32- based on the philosophy and the technology which proved so successful on the MultiSwiss 6x14 and MultiSwiss 6x16. These machines mark a departure from conventional multi-spindle machines, providing the link between multi-spindle and single-spindle turning machines. The machines’ on-board technology means they can deliver cycle times equal to those of cam-operated multi-spindle turning machines.
