World class investment casting foundry experienced in the manufacturing of air and vacuum melted components requiring equiaxed, directionally solidified or single crystal structure.

Preferred alloys are depending of the application: Superalloys, high strength steel or nickel respectively cobalt based alloys.

State of the art equipment covers air and vacuum melting devices (up to Kg. 250.), heat treatment furnaces and full infrastructure for finishing and inspection.

GF Precicast's skills are mainly focused on advanced technology for structural cast parts and airfoils to the

aircraft engine - and the industrial gas turbine industry GF Precicast references are counting among others large OEMs such as GE, Safran, MHI, RR, Siemens, Ansaldo.
