

OUR PRODUCTS ARE APPLIED TO OPERATIONAL OR RESEARCH SATELLITES FOR INSTITUTIONAL AND PRIVATE CUSTOMERS

SWISS QUALITY

Syderal is a fully independent Swiss SME delivering highly sophisticated hardware and software electronic solutions for operational or research satellites. We serve both institutional as well as private customers. A rich and unique flight heritage spanning 20 years demonstrates the company's long and continued commitment to quality and the most advanced space products. Our success comes from a solid dedication to innovation and quality, and our strong ties to the industry. Over the years, the company has established close relationships with engineering schools and universities as well as a robust industrial network.

ENGINEERING TALENT

Syderal serves diverse engineering applications from equipment system engineering to detailed PCB design. Our mission is to define the right technical solution for the right application. Our engineering department covers digital data processing, power supply, actuators/sensors acquisition and control; all of which require complex hardware and software interaction.

COMMITMENT

Syderal employees are committed to achieving our customers' technical and programme objectives while delivering high quality electronic products.
