

## Multiplexer VMUX – even more powerful! (/news/archives/207-multiplexer-vmux-even-more-powerful)

Our multiplexer software Vmux, allowing to assign a COM port to instruments connected by wireless Bluetooth® transmission or by USB cable and to redirect their values to any Windows software (SPC or other) is constantly improving.

This user-friendly software **is an excellent replacement for the still often used multiplexer boxes** and is the perfect ultimate gateway tool for your data.

In addition to data export in any Excel file, the definition of sequences and the multi-gage mode, **we have recently optimised the 1.43 version:**

- Bluetooth® Instruments connection three times faster than before.
- Channel activation by instrument auto detection.

- Access to stored configurations (shared file on PC) in case of user change.

## D62S Advanced (/news/archives/201-d62s-advanced)

Our new Hi\_Gage ONE Smart including important improvement and innovation is now available.

### The mobile solution for measurement applications with P12D

A brand new blocking system and the Bluetooth® Wireless Technology allow measuring groove widths, distances or even diameters, which is quite unique with this kind of instruments.

**The Hi\_Gage ONE Smart is the first wireless tracing and measuring height gage on the market!**
